

Decentralized Clinical Trial Solutions

Transform your clinical trials with our patient enrollment and engagement solutions that prioritize patient care and access.

Home Nursing Service

Our home nursing service provides access to a network of licensed, highly skilled nurses. Trained on the study protocol, they conduct everything from simple questionnaires and vital sign assessments to complex sample collection and study drug administration.

Medication Delivery

With our RSG® Arrive medication transport service, we deliver the study medication directly to a study participant's home. Study staff can trigger and track a request through our Patient Experience Management System, TrialCentralNet® (TCN®).

The service adheres to current social distancing guidance and CDC personal hygiene recommendations to ensure study participant safety during the COVID-19 outbreak.

Meal Delivery

RSG Meals removes the burden many caregivers experience in planning and preparing meals for loved ones.

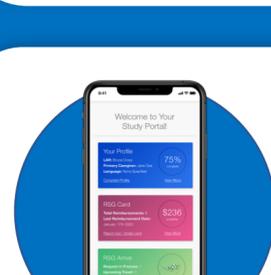

RSG Meals features a selection of healthy meals, including options for those with dietary restrictions. Meals are cooked by chefs, delivered fresh and ready-to-eat.

Telemedicine

Through our patient engagement platform, site staff have the ability to conduct virtual visits with their patients, providing unmatched convenience and access to care.

- Features:
- Video visits
 - eDiary
 - Remote informed consent

Study Apps

Study participants are empowered with content that includes visit-by-visit guides, appointment and medication reminders, travel and reimbursement services, and gamification.

Two-way communication between patients and study staff through instant messaging and email enhances engagement.

Study eBinders

A dynamic tool leveraged by study staff as they engage with patients, eBinders are equipped with essential study information that supports enrollment and engagement efforts.

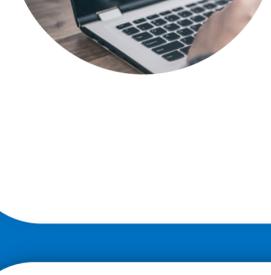

- Features:
- Site communication tools
 - Study support sign-up forms
 - Games and entertainment
 - Paperless visit check-ins

Virtual Investigator Meetings

Engage investigators virtually – and enhance meeting attendance – with our platform that provides real-time engagement and post-meeting analytics.

- Features:
- Multi-session capabilities
 - Polling features
 - Recording functionality
 - Archiving

Voice Assistant Technology

Voice assistants like Alexa and Google Assistant are making their way into the clinical research arena, supporting patient enrollment and engagement efforts.

General use includes recording health assessments, reminding patients about appointments, facilitating diary entries, patient medication reminders, coordinating travel for study appointments, and answering study-related questions.

RSG® Card / Mobile Wallet

RSG Card provides a patient- and site-centric approach to clinical trial reimbursement and payments with unmatched immediacy, convenience, and flexibility.

The newest enhancement is the virtual RSG Card, which accelerates the rate by which patients can make online purchases and payments. Cardholders have immediate access to funds and no longer need to wait to receive a physical card.

Travel Support

RSG Arrive is our concierge service that manages all travel-related logistics – operational and financial – for patients and site staff. From ground transportation and air travel to hotel accommodations and reimbursement, RSG Arrive gets patients to and from each study visit as seamlessly as possible.

All of our products and services are managed out of a central platform, TrialCentralNet (TCN), for a seamless experience.
